

- Please carry this card with you at all times while you are receiving LUNSUMIO
- Show this card to any doctor involved in your care.

## Important Safety Information for Patients receiving LUNSUMIO (Mosunetuzumab) Patient Card

### Information for the Patient

Contact your Doctor or get emergency help **right away** if you have **any** of these. Cytokine Release Syndrome (CRS) symptoms to monitor for:

- Fever (100.4°F/38°C or higher)
- Fast or irregular heartbeat
- Chills or shaking chills
- Confusion
- Severe fatigue or weakness
- Dizziness or light-headedness
- Fainting
- Blurred vision
- Cold or pale clammy skin
- Headache

Immune effector cell-associated neurotoxicity syndrome (ICANS) symptoms to monitor for:

- Confusion or disorientation
- Hallucinations (seeing, hearing or feeling things that are not there)
- Problems with language (difficulty with speech or change in speech)
- Seizures
- Problems with judgement (difficulty in problem-solving and making decisions)
- Problems with memory
- Not being able to concentrate (difficulty staying awake)

- is a group of symptoms caused by small proteins called cytokines, released in your body during inflammation.
- may be caused by receiving LUNSUMIO.

### Cytokine Release Syndrome

Experiencing any of these symptoms could be due to Cytokine Release Syndrome (CRS) and Immune effector cell-associated neurotoxicity syndrome (ICANS), which requires immediate evaluation by a doctor.

## Information for the Treating Doctor

This patient has received *Lunsumio* - **which may cause Cytokine Release Syndrome (CRS) and Immune effector cell-associated neurotoxicity syndrome (ICANS).**

- 1 Evaluate the patient immediately and treat symptoms.
- 2 If CRS or ICANS is suspected, please refer to section 2.2, Table 3 and Table 4 of the Singapore Package Insert for *Lunsumio* for comprehensive instructions on CRS and ICANS management.
